

Variables and Data types

1) Write a program to check whether the given string present in the sequence or not.

```
L=["digital", "lync", "hyderabad", "gachibowli", "kukatpally"]
```

```
A="Lync"
```

2) Write a python program to perform all bitwise operations for given values:

```
a=45, b=65
```

3) Convert the given value into integer, double, complex and calculate absolute value, factorial, square root, exponent of that value.

```
Given z=65.33
```

4) Write a Python program to calculate the sum of the digits in an integer.

5) Write an program that perform all comparison operation to following two values 15 and 2?
